

# Fluoride in New Jersey Public Water Supplies

## January 2011

All ground and surface water in the United States, including in New Jersey, contains naturally occurring fluoride; some water systems add fluoride to the water. Tooth enamel of a child's developing primary and permanent teeth will be permanently strengthened, and tooth decay prevented, by absorbing fluorides from the blood. These can come from natural or added fluoride in drinking water, food or toothpaste, among other sources.

The fluoride level the U.S. Centers for Disease Control (CDC) recommend to prevent tooth decay is 0.7 parts of fluoride per million parts (ppm) of water, and not more than 2.0 ppm to avoid mild fluorosis (slight mottling of tooth enamel). If a water supply has less than that amount naturally, adding fluoride to bring levels to the recommended level results in "fluoride-adjusted" water supplies; this term does not include supplies with only natural fluoride (including private well water).

The next pages list water suppliers that add fluoride, and water supplies whose natural levels of fluoride meet or approach CDC-recommended levels to prevent tooth decay.

# New Jersey Fluoride-Adjusted Public Water Supplies

*These data are the most accurate the state has, but they can change as water systems change in size (for example, larger systems buy smaller ones) and fluoridation (by season or location within a community; systems may stop or start fluoridation, or buy fluoridated water from other systems). **Check with your water system** for the most up-to-date information about fluoride-adjusted water presence and levels delivered to your area.*

County	Water System	Communities Served by Fluoride-Adjusted Water [FAW] (part or all)
Atlantic	Atlantic City WD	Atlantic City
	Egg Harbor City WD	Egg Harbor
Burlington	McGuire Air Force Base	North Hanover
	Willingboro MUA	Willingboro
	Mt. Laurel Twp MUA	Mt. Laurel
	U.S. Army Fort Dix	North Hanover
	Aqua New Jersey—Hamilton Square	Chesterfield
Gloucester	Washington Township MUA	Washington
Hunterdon	New Jersey American-Raritan	<i>FAW direct from NJA-R year-round:</i> Readington, Three Bridges, Whitehouse, Whitehouse Station <i>FAW direct from NJA-R only if town needs emergency water:</i> Flemington
Mercer	East Windsor MUA	East Windsor

Union	United Water Rahway	Rahway

MUA= Municipal Utilities Authority; WD= Water Department. Communities named may be served as well by other systems that do not fluoridate.

# New Jersey Natural-Fluoride Public Water Supplies at or near Desired Concentrations

January 2011

The maximum naturally occurring fluoride permitted in drinking water is 4 parts per million (ppm), versus 2 ppm recommended for fluoride-adjusted water. The Centers for Disease Control have recommended an optimal concentration nationwide of 0.7 ppm, versus an earlier range of 0.8-1.5 ppm in New Jersey. Water systems were listed below if they had at least one sample of at least 0.7 ppm of fluoride between January 1, 2008 and January 1, 2011. Note that this level of fluoride may not be consistent across time.

County	Water System	Communities Served (part or all)	Fluoride Range (parts per million)	Sampling Dates
Atlantic	Buena Borough	Buena	0.47-0.79	1-2-08 to 1-6-10
Camden	Aqua NJ-Blackwood	Blackwood	nd-0.77	2008-10 various
Cumberland	Bayshore Mobile Home Park	Stow Creek	1.31	1-15-09
Gloucester	Clayton WD	Clayton	0.454-1.76	7-(14,23,29)-09
	Deptford Twp MUA	Deptford	nd-1.28	12-15-10
	Glassboro WD	Glassboro	nd-1.84	6-24-08; 4-28-09
	Mantua Twp MUA	Mantua	0.11-1.78	5-27-08
	Manor Water Assns	Mantua	1.22-1.23	4-24-09
